Translator Project: Midterm Eval Criteria
CSCI-UA.0470-001, Fall 2015
Instructor: Randy Shepherd

What follows is the criteria by which I will evaluate your project. This will be the dominate input into your midterm grade.

Code
- Are you able to translate 20 inputs? If not, how many?
- Is the translator *conceptually* correct?
- Does the phase 2 schema demonstrate understanding of the translation scheme?
- How well did the team leverage Xtc and the rest of the toolchain?
- Are there unit tests?
- Is the code reasonably well organized?
- Is the code reasonably well documented?
- Am I able to clone and run the translator easily?
- Did the team tag the repository properly?

Team
- How proactive was the team?
- Did the team distribute the work well?
- How organized was the presentation?
- Was the 1-2 page report submitted?
- Were weekly reports submitted?
- If the team struggled, did they come to me for help?

Individual
- What contributions did the student make to the Github repo?
- How did the team members evaluate the student?
- If the student struggled, did they come to me for help?
